Introduction

If you are new in the world of ISO standards and not sure, which is the right qualification that you need for career advancement, you have come to the right place.

What is important and considered essential for a certification is the value that comprises, an ANSI accredited certification is the only proof that you need to demonstrate proficiency, dedication and commitment to excellence.

PECB offers both Lead Implementer and Lead Auditor training courses for a wide range of international standards. Have a look at the explanations given below and find the right field of expertise that suits you best!

What is the difference between the Lead Implementer and the Lead Auditor courses?

*If you are a practitioner with a vision, and your focus is on helping your organization implement an effective system, then Lead Implementer is the right course for you.

Lead Implementer courses enable participants to develop an expertise to support an organization in implementing and managing a Management System based on ISO.

All our Lead Implementer courses are consistent with the good practices of project management established in ISO 10006 (Quality Management Systems - Guidelines for Quality Management in Projects) and Integrated Implementation Methodology for Management Systems and Standards (IMS2) a methodology developed by PECB.

*If your career is focused on auditing and you want to assist your company on designing, testing controls, and helping in achieving its goals, then Lead Auditor Courses are your future.

Lead Auditor courses enable participants to develop the expertise needed to audit a Management System and to manage a team of auditors by applying widely recognized audit principles, procedures and techniques. Based on practical exercises, the participant will develop the abilities (mastering audit techniques) and skills (managing audit teams and audit program, communicating with customers, conflict resolution, etc.,) necessary to the efficient conduct of an audit.

All our Lead Auditor training courses include Accepted Audit Methodology for Management Systems and Standards (AMS2) a methodology developed by PECB.
